Kivu Resort - Feature Specification & Quotation

1. Overview

Kivu Resort's platform will be a fully integrated hospitality website combining a **Content Management System (CMS)**, a **Customer Relationship Management (CRM)** module, **online booking and payments,** and **customer engagement tools**. The goal is a site that staff can update entirely without a developer, with no deployments required for content changes.

2. CMS - Content Management

- **No-code editing:** all pages, text, images, and media editable from an admin dashboard; changes go live immediately with no deployment.
- **Hotel & category management**: create and manage hotel categories (city, safari, etc.) and hotels with descriptions, media, addresses, and map coordinates for discoverability.
- **Restaurants & menus:** manage restaurants under each hotel, menu categories, food catalogue items (with images, video, price ranges), and menu variants (quantity/price).
- **Experiences, facilities & activities:** manage experiences, facilities, pool plans, tour plans, kids' activities, gym, special offers, team building, and conferencing - each with descriptions, media, pricing, and query-price options.
- **Time-based pricing**: support hourly, daily, weekly, monthly, and annual pricing factors where applicable.
- **Rooms**: manage room types with amenities, beds, baths, occupancy, rates, images, and video.
- **Gallery:**gallery categories and hotel-linked image galleries.
- **QR code generation**: printable QR codes per hotel/room so guests can scan to order food from restaurants and receive it without stating their location.
- Media library: centralized storage and reuse of images and videos across the site.
- **SEO & metadata:** editable page titles, descriptions, and social sharing previews.

- **Approval Workflows -** Enable the admins to approve on changes on the go, and when sending out promotional messages.
- **Role-based access**: separate permissions for content editors, booking managers, and CRM staff.

3. Bookings & Payments

- **Online bookings** for rooms, pool plans, tours, gym, events, and other activities.
- **Availability & rate management** tied to room and plan records.
- **Payment integration via Pesapal** - card and mobile money.
- **Automated confirmations** via email and SMS after successful payment.
- **Booking management dashboard** for staff: view, modify, cancel, and track bookings.
- **Refunds and cancellations policy** handled within the dashboard.
- **Invoicing and receipts** generated automatically.

4. CRM - Leads & Customer Management

- **Leads management** with task assignment to staff.
- **SMS alerts** for lead assignments and follow-ups.
- **Customer profiles** with booking history and contact details.
- **Loyalty program**: track points earned on bookings and redemptions.
- **Referral program**: track referrals and reward referrers.
- **Bulk SMS / promotional messaging** to customer segments.
- **Affiliations management** for partner and loyalty relationships.
- **Segmentation and campaign tracking** for promotions.
- **Consent and opt-out management** for messaging compliance.

5. AI Chatbot

- **24/7 automated assistant** on the website to answer questions about rooms, rates, amenities, restaurants, and activities.
- **Booking assistance:** guide visitors toward the right room or plan and hand off to the booking flow.
- **Lead capture**: collect visitor details and create leads in the CRM automatically.

- **Handoff to human staff** when the bot can't resolve a query.
- **Multilingual support** for international guests.

6. WhatsApp Automation

- **Automated booking confirmations and reminders** via WhatsApp.
- **Lead follow-up sequences** triggered from the CRM.
- **Promotional broadcasts** to opted-in customers.
- **Two-way messaging** so guests can ask questions and staff can respond from a shared inbox.
- **Chatbot integration on WhatsApp** mirroring the website assistant.
- **Template message management** for approved message types.

7. Analytics & Reporting

- **Website traffic and engagement analytics.**
- **Booking and revenue reports** by hotel, room type, and activity.
- **Lead conversion tracking** from enquiry to booking.
- **Campaign performance** for SMS and WhatsApp promotions.
- **Loyalty and referral performance** reporting.

8. Additional Features Worth mentioning

- **Multi-hotel support** with a single admin backend.
- **Mobile-responsive design** across the public site and admin.
- **Email notifications** alongside SMS for bookings and leads.
- **Guest reviews and ratings** moderated through the CMS.
- **Dynamic offers and promo codes** applied at checkout.
- **Google Maps integration** for accurate directions and distances between activities.
- **Backup and data export** for bookings and customer records.

9. In a Nutshell

The CMS lets staff manage all website content and track bookings, leads, and analytics, with no developer involvement or deployments. The CRM handles promotions, loyalty, referrals, and customer communication, while payments run through Pesapal and customer engagement is extended through an AI chatbot and WhatsApp automation.
